

# Network Limited Distribution Box

## AI Overview

A Network Limited Distribution Box is a compact, protected unit that manages and distributes network or low-voltage connections, often supporting PoE, fiber, and industrial network integration.

### Overview

A Network Limited Distribution Box (NDB) serves as a central point for distributing network or low-voltage connections in industrial, commercial, or utility environments. It provides a secure, organized interface for connecting multiple devices, managing power delivery, and protecting cables from environmental hazards. These boxes are commonly used in applications ranging from Ethernet networks to fiber optic systems and low-voltage electrical distribution.

### Key Features

- **Connectivity Options:** NDBs often include multiple Ethernet ports, both PoE and non-PoE, as well as fiber ports for single-mode or multi-mode connections. This allows integration with high-speed networks and redundancy setups.
- **Power Management:** Many boxes support Power over Ethernet (PoE), enabling them to supply power to connected devices such as access points, cameras, or industrial sensors.
- **Environmental Protection:** Designed for harsh or limited-space environments, these boxes are weatherproof and durable, ensuring reliable operation in outdoor or industrial settings.
- **Fiber Management:** In fiber-based NDBs, splice cassettes and adapters organize a...
