

Network panel with module dual-port fiber optic

AI Overview

A dual-port fiber optic module is a modular component for patch panels that provides two fiber connections per port, enabling high-density, flexible, and scalable network connectivity.

Overview

Dual-port fiber optic modules are designed to fit into fiber distribution panels or chassis, providing two fiber connections per module. They are commonly used in data centers, enterprise networks, and telecom installations to manage and organize fiber connections efficiently while supporting high-speed data transmission . These modules can accommodate singlemode or multimode fibers and support various connector types such as LC, SC, or MPO/MTP.

Key Features

- **High Density:** Dual-port modules maximize fiber density in limited rack space, often allowing dozens of connections in a 1RU or 2RU panel .
- **Modular Design:** Modules can be inserted or removed from panels like the Amphenol C2E/C2X chassis or CommScope FPX series, enabling flexible network expansion .
- **Pre-Terminated Options:** Many modules come pre-terminated with pigtails or adapter packs, reducing installation time and minimizing errors .
- **Scalability:** Panels can host multiple dual-port modules, allowing networks to grow...
