

No internet speed from fiber optic router

AI Overview

A complete loss of internet from a fiber optic router can stem from faulty cables, power issues, router misconfigurations, or service provider problems, and can often be resolved through systematic troubleshooting.

Step 1: Check Power and Connections

Ensure your Optical Network Terminal (ONT) and router are powered on. Inspect all fiber optic cables for visible damage, sharp bends, or loose connections, as even minor issues can disrupt the signal. Dirty connectors are a common cause of network failures, so clean them with lint-free wipes and isopropyl alcohol if necessary.

Step 2: Inspect Router and Modem

Restart your router and ONT to clear temporary glitches. Verify that the router firmware is up to date, as outdated firmware can prevent proper communication with the fiber network. Check the router's indicator lights; a "LOS" (Loss of Signal) LED often signals connectivity issues.

Step 3: Test the Fiber Signal

If possible, use an optical power meter or OTDR to measure signal strength. Values outside the typical range (around -15dBm to -30dBm) may indicate a problem with the fiber line. Swap transceivers or media converters with known-good units to rule out hardware failure....
