

No signal from optical receiver

Overview

Verify that the receiver input selected is the same input that the optical cable from the CD/DVD player is connected to on the back of the receiver. Unlike the modern “smart” HDMI connections that talk to each other, legacy digital connections are. Optical audio is a popular method of transmitting high-quality audio signals through a digital connection. I have an optical cable connected from the TV to a JVC audio receiver - but unable to receive any sound from my surround sound and each speaker is wired to the receiver. Systematically identifying and fixing common causes can ensure your audio and video devices work seamlessly. **IMPORTANT:** This solution assumes that the receiver is able to produce audio using a different input source (tuner, etc).
