

OLT cannot detect optical module

Overview

Work the fault from glass to provisioning and you will resolve almost every ONT registration failure: (1) clean andamp; reseal the fiber, (2) measure optical power (target -8 to -27 dBm), (3) verify OLT authentication andamp; VLAN, (4) rule out GPON/EPON mismatch, (5). Work the fault from glass to provisioning and you will resolve almost every ONT registration failure: (1) clean andamp; reseal the fiber, (2) measure optical power (target -8 to -27 dBm), (3) verify OLT authentication andamp; VLAN, (4) rule out GPON/EPON mismatch, (5). An ONU connected to a GPON port of an OLT fails to go online normally, but the queried Run state of the ONU is displayed as offline by running the display ont info command on the OLT. Going online refers to a process that after being powered on, an ONU registers with an OLT and sets up a management. It is found that the ONU is auto discovered by the OLT. Replace the optical module of the PON port or replace the board. 2: Query the protection group status. Common GPON network problems are mainly divided into several categories, including optical path failure, equipment hardware failure, ONU management abnormality, service performance problems and network protection failure. The following are specific analysis and treatment methods: 1. Loss of optical. GitHub - kaoheng1515/OLT-GPON-XPON-Troubleshooting: This repository contains the most frequently used troubleshooting, diagnostic, and recovery commands for GPON networks (OLT + ONU/ONT). It is designed for field engineers, NOC teams, and ISP technicians working daily with fiber-to-the-home (FTTH).
