

One switch connects to multiple broadband connections

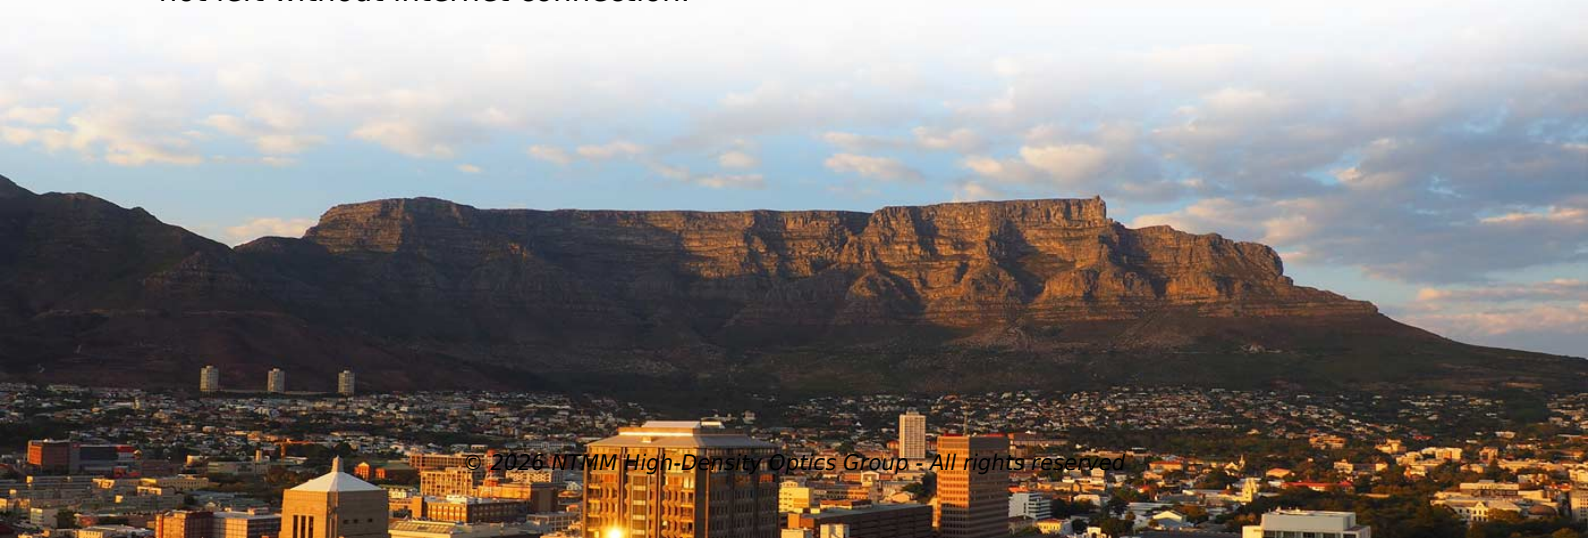

Overview

You can connect a single switch on your network to two ISPs. Connect any of the "LAN" ports on the first router to a port in the switch. A network switch can be added to any of the LAN ports of. TL;DR: Is there a way to have two different (unreliable) ISPs connected to a single network switch, so that when one drops out, the home network is automatically switched to the other ISP?

--- Hi all! I am a networking hobbyist, and I built out a home network for a family friend of mine living in. I want to connect two routers to a switch which will then be connected to a modem. So I bought two addresses at my ISP. Attached is a simple schematic that explains what I want to do. Is there any. If you're shopping for the best router or the best wired router, you may want to connect multiple network devices to your cable modem. Are there technologies in Network Switches to support active switching or load balancing across the two connections?

I know this maybe standard but I am not familiar with the. So when one internet connection is interrupted (because that happens sometimes with my current ISP) I'm not left without internet connection.
