

Outer surface of the distribution box

AI Overview

The outer surface of a distribution box is designed for durability, safety, and environmental protection, typically featuring metal or thermoplastic materials with specialized coatings and sealing treatments.

Material and Construction

The outer shell of a distribution box is commonly made from galvanized steel, stainless steel, or engineering thermoplastics such as Polycarbonate (PC), Acrylonitrile Styrene Acrylate (ASA), or epoxy-coated metals . For outdoor applications, the metal is often 2 mm GI sheet steel with reinforcement channels to maintain structural integrity . The roof may be slightly slanted with overhangs to prevent water accumulation, and door handles and hinges are designed to be secure and corrosion-resistant .

Surface Treatment

The surface of the distribution box is treated to ensure uniform color, smooth lines, and resistance to environmental factors. Electrostatic spray molding is commonly used to apply coatings that meet specifications for color, evenness, and texture . Additional treatments may include powder coating, hot-dip galvanizing, or epoxy coatings to enhance corrosion resistance and durability .

Waterproofing and Dustproofing

Outdoor distribution boxes require high waterproof and dustproof performance. Ma...
