

# Papua New Guinea Photovoltaic Cable Tray

## AI Overview

The Papua New Guinea Photovoltaic Cable Tray Project is part of broader renewable energy initiatives deploying solar PV systems and supporting infrastructure to expand electricity access in rural and off-grid communities.

### Project Overview

The project focuses on installing solar photovoltaic (PV) systems in schools, health facilities, and rural communities across Papua New Guinea, particularly in East and West Sepik Provinces . These systems include solar panels, inverters, battery storage, and cable trays to safely route electrical wiring and ensure reliable power distribution. Cable trays are critical for organizing and protecting PV system wiring, especially in institutional and industrial installations.

### Implementing Agencies and Support

The project is implemented under the EU-funded STREIT Programme, with UNDP leading installations and training local technicians . Companies like FTMRs Solar and Cetelnet provide technical support, system design, and maintenance services, ensuring PV systems operate efficiently over their lifecycle . These agencies also supply PV cables, energy storage solutions, and hybrid systems for off-grid and partially grid-connected sites.
