

Photovoltaic module packing operation process

Overview

This manual provides information about photovoltaic modules in packaging operation, loading, unloading, storage and use. All safety measures and operating procedures outlined in this manual must be followed by operators. Polysilicon Production – Polysilicon is a high-purity, fine-grained crystalline silicon product, typically in the shape of rods or beads depending on the method of production. The process starts with the frame assembly table, which assembles the frame of the module. If you have any questions, please contact the technical support staff for more. To ensure the safety of loading, unloading, unpacking and storage of PV modules, please read this manual carefully. When you need to unpack and install the modules, you can search and download relevant content from Jinko's official website. These steps are crucial for maintaining the integrity of solar components and maximizing their. This manual contains information regarding handling, storage, installation, operation, maintenance and safety handling of Citizen Solar photovoltaic modules.
