

Plug-in wiring in distribution box

AI Overview

Wiring a plug-in type distribution box involves connecting the main power supply to the main switch, installing circuit breakers, and wiring outgoing circuits safely with proper labeling and grounding.

Safety First

Before starting, ensure the main power is turned off to prevent electric shock. Use insulated tools, wear protective gloves, and verify that the installation site is dry and free of obstructions. Always follow local electrical codes and regulations .

Components You Will Need

- Main Double Pole MCB (Main switch)
- Single Pole MCBs for individual circuits
- RCCB (Residual Current Circuit Breaker) for safety
- Live (Phase), Neutral, and Earth wires
- Screwdrivers, wire strippers, and a multimeter
- Cable markers for labeling circuits

Step-by-Step Wiring Process

- Mount the Distribution Box Secure the box at an accessible height on a wall, ensuring it is stable and free from moisture or obstructions .
- Connect the Incoming Power Attach the incoming live wire (brown or red) to the main terminal of the double pole MCB. Connect the neutral wire to the neutral bus bar and the earth wire to the grounding bar
