

Polymer Cable Tray Material

AI Overview

A polymer cable tray typically includes a main frame, functional modular components, surface treatments, and optional lids or covers for protection.

Main Frame

The main frame forms the structural backbone of the tray. It is usually made from high-strength polymer materials such as fiberglass-reinforced plastic (FRP), which provides excellent corrosion resistance, insulation, and lightweight durability while maintaining high tensile and bending strength. The frame can be designed as a ladder, solid, or hollow structure, depending on the application and cable protection requirements.

Functional Components

Polymer cable trays include modular components to allow flexible installation and routing of cables. These components typically consist of:

- Straight sections for linear cable runs
- Elbows for directional changes
- Tees and crosses for branching or intersecting cable paths
- Lids or covers for solid trays to protect cables from dust, moisture, and mechanical damage

Surface Treatment...
