

Polyurethane cable trays come in various specifications

AI Overview

Polyurethane cable trays are high-strength, corrosion-resistant, flame-retardant cable management systems suitable for demanding environments.

Material Composition

Polyurethane cable trays are made from a polymer composite consisting of resin, carbon or reinforcing fibers, and other additives that enhance mechanical and electrical properties. This composition provides superior electrical insulation, high mechanical strength, and lightweight construction, making them easier to handle and install compared to traditional metal trays.

Mechanical and Load-Bearing Properties

- Bending Strength: Maintains ≥ 120 MPa even under 30%-90% relative humidity.
- Cable Load Capacity: Typically supports 10–20 kg/m, depending on tray size and span.
- Lightweight: Approximately 30% lighter than traditional metal trays, reducing installation effort.
- Durability: Resistant to aging, UV exposure, and mechanical wear, ensuring a long service life.
