

Precautions for cable trays in Greece

Overview

PD 41/2018 and TOTE 2451/86 provide recommendations and guidance on the provision of measures to control or mitigate the effects of fire. Requirements have been included for cables supplying safety circuits. Cables in escape routes shall be as short as practicable. In modern architectural and industrial facilities, the correct installation of cable trays not only improves cable management efficiency but also ensures the safe operation of electrical systems. It ensures that cables are properly supported and protected, reduces the risk of cable damage, and facilitates maintenance and management. If the vehicle isn't suitable for unloading by forklift as indicated in the picture below, it should be hand unloaded. If hand unloaded, workers should wear gloves and steel toed footwear. The most common hazards include: □□ If ignored, these risks can lead to equipment failure, fire, or even fatal accidents. Working with cable trays is not just a routine installation job. If a tray is overloaded, maintain spacing or to keep cables in place when the tray is bent the minimum bend radius for cables as they exit the bottom of the cable tray.
