

Price of Bimetallic Cable Tray Supports

AI Overview

Bimetallic cable tray supports typically range from \$50 to \$250 per unit, depending on size, load capacity, and supplier.

Overview

Bimetallic cable tray supports are designed to combine the strength of steel with the corrosion resistance of aluminum, making them suitable for industrial, commercial, and outdoor installations. They are used to securely hold cable trays, ensuring stability and safety for electrical and communication cables. These supports can be adjustable, telescopic, or fixed, and are often customized to meet specific project requirements.

Factors Affecting Price

- **Material Composition:** The proportion of steel and aluminum, as well as any galvanization or coating, affects cost. Higher corrosion resistance or heavier-duty steel increases the price.
- **Size and Load Capacity:** Larger supports or those designed for heavy-duty cable trays cost more due to increased material and structural requirements.
- **Design Features:** Adjustable or telescopic supports with pivoting joints are more expensive than fixed supports because of added complexity.
- **Supplier and Sourcing:** Factory-direct or OEM options from manufacturers in China or Hong Kong can offer lower prices, especially for bulk orders, while branded suppliers may charge a premium for quality assurance and certifications.
- **Volume Discounts:** Purchasing in bulk often reduces the per-unit cost, which is common in large-scale construction projects
