

Price of Optical Amplifier

AI Overview

Optical amplifier prices vary widely depending on type, power, and application, typically ranging from a few hundred to several thousand dollars per unit.

Common Types and Price Ranges

1. Erbium Doped Fiber Amplifiers (EDFA) EDFA is the most widely used optical amplifier, especially in telecommunications and WDM networks. Prices for compact or mini-module EDFAs generally start around \$500–\$1,500 for low-power laboratory or OEM modules, while high-power or DWDM-capable EDFAs for long-haul networks can cost \$3,000–\$10,000 or more, depending on gain, output power, and integration features . 2. Semiconductor Optical Amplifiers (SOA) SOAs are smaller, electrically pumped amplifiers suitable for moderate gain and fast switching applications. Entry-level SOAs can cost \$300–\$1,000, while high-performance or custom SOAs for telecom or research applications may exceed \$2,000–\$5,000, depending on gain, noise figure, and wavelength range . 3. DPSS (Diode-Pumped Solid-State) Amplifiers DPSS amplifiers are used in high-power laser applications, spectroscopy, and LIDAR. Prices vary significantly with output power and pulse characteristics. Small CW DPSS amplifiers may start around \$1,000–\$2,000, while high-power pulsed systems can reach \$10,000–\$50,000 or more for specialized OEM solutions .

Factors Affecting Price

- Output Power and Gain: Higher output power and gain typically increase cost.
- Wavelength Range: Amplifiers covering multiple or tunable wavelengths are more expensive....
