

Price of a secondary distribution box actual product

AI Overview

The price of a secondary distribution box typically ranges from \$200 to \$2,000 depending on specifications, materials, and included components.

Overview

A secondary distribution box (also referred to as a secondary rack or electrical secondary rack) is used to support and organize conductors on overhead pole lines or within electrical distribution systems . These boxes or racks can accommodate multiple conductors, usually 2 to 5 spools, and are constructed with durable materials such as hot-dip galvanized steel to ensure long-term performance and safety .

Factors Affecting Price

- **Material and Construction:** Boxes made from ABS plastic or standard steel are on the lower end of the price spectrum, while powder-coated or stainless steel units designed for harsh environments cost more .
- **Capacity and Configuration:** The number of circuits or spools (2, 3, 4, or 5) directly affects the price. Larger or modular units with more spools are more expensive .
- **Internal Components:** A box sold empty is cheaper, but including high-quality circuit breakers, surge protectors, busbars, or smart monitoring features increases the cost significantly .
- **Customization and OEM Options:** Custom designs, branding, or specialized mounting configurations can raise the price, especially for commercial or industrial applications
