

Price of composite optical cable Gyta

AI Overview

The price of GYTA composite optical cables varies widely, typically ranging from \$1 to \$10 per meter depending on fiber count, cable length, and protective features.

Pricing Overview

GYTA fiber optic cables are armored, outdoor-rated cables designed for long-distance and high-capacity data transmission. Prices depend on several factors including fiber type (commonly G.652.D single-mode), number of cores (2 to 288+), cable length, armor type (aluminum or steel), and environmental protection features such as moisture resistance and rodent protection. Typical market prices for standard GYTA cables range from \$1 to \$10 per meter, with higher fiber counts and specialized armoring increasing the cost.

Factors Affecting Price

- **Fiber Count:** More cores increase material and manufacturing costs. Cables with 144 fibers or more are significantly more expensive than 2-12 core variants.
- **Cable Length:** Bulk orders or custom lengths can affect unit pricing.
- **Armor and Jacket Material:** Aluminum tape or corrugated steel armoring adds durability but increases cost. Polyethylene jackets enhance environmental resistance.
- **Performance Specifications:** Low attenuation, high tensile strength, and hydrolysis-resistant loose tubes contribute to higher prices.
- **Supplier and Region:** Prices vary by manufacturer and shipping location, with international suppliers often offering competitive rates for bulk orders.
