

Price of horizontal bends with beveled edges for cable trays

AI Overview

Horizontal bends for cable trays with beveled edges typically range from \$20 to \$150 per piece, depending on material, size, and finish.

Price Overview

The cost of horizontal bends for cable trays varies significantly based on material, thickness, and manufacturing process:

- Steel (galvanized or powder-coated): Common for heavy-duty industrial applications; prices generally range from \$30 to \$120 per bend depending on size and thickness .
- Aluminum: Lightweight and corrosion-resistant, suitable for installations where weight is a concern; prices typically range from \$40 to \$150 per bend .
- Fiberglass: Non-conductive and ideal for electrical insulation; prices are usually higher, around \$80 to \$150 per bend . The thickness of the tray also affects pricing. For example, hot-dip galvanized steel bends with a thickness of 1.3–2.5 mm are commonly used in industrial settings and may cost more than thinner versions .

Factors Affecting Price

- Bend Angle and Radius: Standard 90-degree bends are widely available, but custom angles or tight-radius bends may increase cost .
- Beveled Edges: Bends with beveled edges for smoother cable routing may carry a premium of 10–20% over standard edges....
