

Price of small machine for direct-buried optical cable

AI Overview

Small machines for direct-buried optical cable installation typically range from a few hundred to several thousand USD, depending on type, power source, and features.

Types of Machines

1. Hand-Operated Cable Pulling Machines These are simple, manually operated devices suitable for short-distance or small-scale installations. They rely on a crank or lever mechanism and are ideal for tight spaces or low-voltage networks. Prices for small hand-operated machines generally start from \$500 to \$2,000, depending on build quality and manufacturer . 2. Electric or Diesel-Powered Cable Pulling Machines Compact electric or diesel-powered machines provide higher pulling force for longer distances and more demanding installations. Small electric models suitable for direct-buried cables can cost \$2,000 to \$10,000, while diesel-powered units may be slightly higher due to engine complexity and mobility . 3. Micro-Trenchers Micro-trenchers like the Ditch Witch MT9 or MT12 are designed for precise, minimal-disturbance trenching in urban or residential areas. These machines are compact and highly efficient for fiber optic cable installation. Prices for small micro-trenchers typically start around \$10,000 to \$25,000, depending on model and optional features such as advanced saw blades or push/pull operation . 4. Specialized Stripping or Direct-Buried Machines Machines like the BJ-680B direct-buried optical fiber cable stripping machine are used for preparing cables for installation. These are smaller, specialized units, and prices are usually quoted upon request, often ranging from \$1,000 to \$5,000 for small-scale units
