

Reserved for water and electricity distribution boxes

AI Overview

Reserved distribution boxes are pre-configured enclosures designed to provide safe, organized, and future-ready power and control interfaces for water and electrical systems.

Purpose and Applications

Reserved distribution boxes are used to pre-allocate power and control circuits for systems that will be installed later, such as water treatment equipment, pumps, filtration units, or other building utilities . They serve as a central hub for electrical distribution, ensuring that future connections can be made without major reconstruction, saving time and construction costs . These boxes are commonly applied in residential, commercial, industrial, and municipal projects, particularly where water and electricity systems need coordinated control.

Key Components

- **Main Incoming Protection:** Typically includes a molded case circuit breaker that acts as the main switch, protecting the entire reserved circuit from overloads and short circuits .
- **Branch Circuit Protection:** Individual circuits are protected by residual current circuit breakers and miniature circuit breakers, ensuring that a fault in one device does not affect the entire system .
- **Control and Auxiliary Components:** Front panels may include start/stop buttons, display screens, relays, and terminal blocks, allowing manual control and monitorin...
