

Router with fiber optic interface not found

AI Overview

A router may fail to detect a fiber optic interface due to incompatible SFP modules, misconfigured settings, or ISP-related issues.

Check Physical Connections and Hardware

Ensure that all fiber optic cables are properly connected and free from damage, sharp bends, or contamination. Clean connectors with lint-free wipes and isopropyl alcohol if necessary, as dust or oil can block the signal. Verify that the transceiver (SFP module) is compatible with your router and the ISP's network. Using non-compatible or third-party SFPs can prevent the router from establishing a connection.

Verify Router and ONT Setup

Most fiber connections require an Optical Network Terminal (ONT) provided by your ISP. The fiber cable should connect to the ONT, and then the ONT connects to your router via Ethernet. Ensure the ONT is powered on and the status lights indicate a stable connection. If your router has a dedicated fiber or SFP port, confirm it is enabled and configured correctly.

Configuration and IP Settings

Check your router's WAN settings. Some ISPs require static IP addresses, while others use dynamic IP (DHCP) or PPPoE. Incorrect settings can prevent the router from det...
