

SFC fiber optic patch cord

AI Overview

An SFC fiber optic patch cord is a fiber cable with connectors at both ends, used to connect devices in fiber optic networks for high-speed, reliable data transmission.

Overview

A fiber optic patch cord, also called a fiber patch cable, fiber jumper, or fiber patch lead, is a pre-terminated fiber cable designed to connect network devices, optical switches, or telecommunications equipment quickly and efficiently . It consists of two main components: the optical fiber core and the connector kit (housing and ferrule). The core is typically made of high-quality glass, surrounded by a cladding layer and a protective coating, often reinforced with Kevlar for durability .

Types of Fiber

Fiber patch cords are available in single-mode (SM) and multimode (MM) types. Single-mode fibers (OS2) support long-distance, high-bandwidth transmission with a small core diameter (around 9 μm), while multimode fibers (OM1, OM3, OM4, OM5) are suitable for shorter distances and high-speed data applications .

Connector Types

Patch cords come with a variety of connectors to match different network equipment, including SC, LC, ST, FC, and MTP/MPO . The choice of connector depends on the network interface and the required performance. High-quality cords offer low insertion loss and low return loss, ensuring minimal signal degradation
