

# Sc Fiber Distribution Box

## AI Overview

An SC Fiber Distribution Box is a passive optical enclosure designed to terminate, splice, and manage SC fiber optic connections, typically supporting 12 SC adapters in a secure, organized, and durable housing.

### Overview

An SC Fiber Distribution Box serves as a critical point in fiber optic networks, connecting feeder cables to drop cables in FTTX, FTTH, or enterprise LAN environments. The "12-SC" designation indicates that the box can accommodate 12 SC simplex adapters, which are widely used due to their push-pull latching mechanism, low insertion loss, and high repeatability . These boxes act as the demarcation point between external plant cables and internal network equipment.

### Construction and Materials

High-quality SC distribution boxes are typically made from cold-rolled steel (1.0–1.2mm thick) with electrostatic epoxy powder coating for corrosion and impact resistance . Internal components, such as splice trays and cable routing spools, are often made from ABS or polycarbonate plastics that meet UL94 V-0 flame retardant standards, ensuring safety in case of electrical faults . Some boxes for outdoor or semi-outdoor use achieve IP55 or IP65 ratings, providing protection against dust and low-pressure water jets .
