

Senegal Fireproof Cable Tray

AI Overview

Fireproof cable trays in Senegal should use galvanized steel, stainless steel, or flame-retardant coated trays, installed with firestopping measures and compliant with international safety standards.

Material Selection

- Indoor installations: Painted steel or galvanized steel trays provide mechanical strength and corrosion resistance.
- Outdoor or high-humidity environments: Hot-dip galvanized steel, stainless steel, or aluminum alloy trays are recommended for enhanced corrosion resistance.
- Special fireproofing: Flame-retardant coated trays or fire-resistant plastic composites can be used to slow flame spread and increase heat resistance .

Fireproofing Measures

- Install fire barriers within trays to isolate different fire zones.
- Seal openings where trays pass through walls or floors using fire-rated penetration sealing materials.
- Use firestop packs, firestop mastic, or fire-resistant mineral wool for slab penetrations, ensuring gaps do not exceed 1 cm² and packing thickness is at least 24 cm .
- For large openings, a fire-resistant backing plate should be installed before sealing .
