

Simplest Wiring for Lighting Distribution Boxes

AI Overview

A simple lighting distribution box can be wired by connecting the main supply to an RCCB, distributing power through MCBs to individual lighting circuits, and ensuring proper neutral and earth connections.

Components Needed

- RCCB (Residual Current Circuit Breaker): Protects against electric shock.
- MCBs (Miniature Circuit Breakers): Protect individual lighting circuits from overload and short circuits.
- Bus bars: For neutral and earth connections.
- Incoming main supply cable: Phase and neutral wires sized according to total load.
- Outgoing cables: To lighting circuits.

Step-by-Step Wiring Procedure

- Turn Off Main Power: Ensure the main supply is disconnected before starting any wiring to prevent electric shock .
- Mount the Distribution Box: Secure the box on a wall or panel in an accessible location.
- Connect the Main Supply:
 - Connect the phase (live) wire from the main supply to the input terminal of the RCCB.
 - Connect the neutral wire to the RCCB's neutral input.
 - Connect the earth wire to the earth bus bar inside the box
