

Specifications of Egyptian FRP Cable Trays and Brackets

AI Overview

Egyptian FRP cable trays and brackets are lightweight, corrosion-resistant, flame-retardant, and designed for both ladder and perforated types, suitable for harsh environmental conditions.

Types of FRP Cable Trays

- Ladder Type: Composed of two longitudinal side rails connected by multiple rungs, providing excellent ventilation and heat dissipation. Ideal for supporting multiple cables in industrial and building wiring systems .
- Perforated/Channel Type: Features a perforated bottom with integral side rails, often used in fire-proof, moisture-proof, dust-proof, and anti-interference applications. Covers (flat or peaked) can be added for additional protection against mechanical damage or snow accumulation .

Material and Resin Systems

- Polyester Resin: Standard option offering good UV and weather resistance .
- Vinyl Ester Resin: Provides superior corrosion and heat resistance, suitable for highly corrosive or high-temperature environments .
- SMC Reinforced Fiberglass Brackets: High-strength, lightweight, fully insulated, water-resistant, and fire-resistant, capable of withstanding temperatures from -50°C to 130°C
