

Specifications of High-Quality Steel Cable Trays

AI Overview

Steel cable trays are available in various types and finishes, designed to meet international standards for mechanical strength, corrosion resistance, and electrical safety.

Material Types and Finishes

Steel cable trays are commonly manufactured from hot-dip galvanized steel, pre-galvanized steel, and stainless steel (304 or 316 grades), providing varying levels of corrosion resistance and mechanical strength . Stainless steel trays, particularly AISI 316L, offer enhanced resistance to chlorides and harsh environments due to their chromium and molybdenum content . Coatings such as electro-galvanization or hot-dip galvanization protect steel from corrosion, with the protective effect increasing with coating thickness .

Standards and Compliance

Steel cable trays comply with international standards including BS EN 61537:2023, NEMA VE 1 and VE 2, ANSI/NFPA 70 (NEC), and ASTM specifications such as A123, A653, A1011, A1008, and B633 . These standards cover material quality, galvanization, structural integrity, and installation guidelines. CE marking or UL listing indicates compliance with European or North American safety regulations .
