

Specifications of Small Distribution Boxes for Industrial Construction

AI Overview

Small distribution boxes for industrial construction are compact, durable units designed for efficient power and signal distribution, featuring IP-rated protection, modular connectivity, and compliance with international standards.

Key Features

Protection and Durability: Industrial small distribution boxes are typically rated IP67 for dust and water resistance, making them suitable for harsh environments, including exposure to moisture, oil, and vibration. Materials used include high-grade thermoplastics, aluminum, or stainless steel, ensuring mechanical robustness and long-term reliability.

Connectivity and Ports: These boxes support multiple connectivity options such as M8, M12, M16, and M23 connectors, with single or dual pre-wired ports. LED indicators for power and function are often included for easy monitoring. Modular designs allow flexible input/output configurations, including Cam-Lock, twist-lock, and GFCI-protected outlets.

Electrical Specifications: Small distribution boxes accommodate a range of amperage ratings from 32A to 125A, with multiple circuits to suit diverse industrial applications. They can handle both single-phase and three-phase power distribution, making them versatile for construction sites, factories, and automation systems.

Installation and Customization: Many units are pre-wired for quick installation, with options for high-bending cables suitable for moving machinery. Customization is available for labeling, coding, and cable lengths, typically ranging from 1m to 10m. Surface-mounted and flush-mounted options are offered to fit different installation requirements.
