

Standard dimensions of switch distribution boxes

AI Overview

Switch boxes typically measure around 2" × 3" for a single-gang, while distribution boxes vary widely, commonly from 200 × 200 × 120 mm up to 800 × 600 × 300 mm for wall-mounted units.

Switch Boxes

Single-gang switch boxes are the most common type, used for one switch or outlet, with typical dimensions of 2" × 3" (width × height) and a depth of 3.5" to accommodate wiring and devices like dimmers or GFCIs . Multi-gang boxes allow multiple switches or outlets in one location, with widths increasing proportionally (e.g., 2-gang: 4" × 3", 3-gang: 6" × 3"). Round or octagon boxes are used for ceiling fixtures, fans, or smoke detectors, with diameters typically 4" to 5" and depths of 1.5" to 2.5" .

Installation height and spacing: Fixed switch boxes should be installed 1.3 m to 1.5 m above the floor, while mobile or temporary boxes can be 0.6 m to 1.5 m. The horizontal distance between a switch box and fixed equipment should not exceed 3 m, and the distance between a distribution box and a switch box should not exceed 30 m .
