

Steel Foundation for Distribution Box in Distribution Room

AI Overview

A steel foundation for a distribution box provides a durable, stable, and grounded base, ensuring safety, proper alignment, and compliance with electrical standards.

Material and Construction

Steel foundations for distribution boxes are typically made from cold-rolled steel plates with surface treatments such as epoxy resin electrostatic spraying to enhance durability, corrosion resistance, and aesthetic appearance (). These foundations can support IP55 to IP65 rated enclosures, making them suitable for indoor and controlled environments, protecting against dust and water ingress ().

Installation Requirements

- **Pre-installation Preparation:** The floor should be leveled, and any ceiling or wall decoration work completed. Embedded conduits and cable trenches under the foundation must be inspected and approved before installation ().
- **Foundation and Mounting:** The steel foundation must be securely anchored to the floor using bolts or other approved fasteners. For floor-standing distribution boxes, the foundation should align with the box's mounting points, ensuring stability and proper load distribution ().
- **Grounding and Electrical Safety:** The metal frame and foundation steel must be reliably connected to the protective earth (PE) conductor. Doors with electrical devices should use a yellow-green insulated copper flexible wire with a minimum cross-sectional area of 4mm² for grounding (). The PE bar inside the distribution bo...
