

Surge-enabled distribution box

AI Overview

A surge-enabled distribution box is a power distribution unit equipped with surge protection devices (SPDs) to safeguard electrical systems and sensitive equipment from voltage spikes and lightning-induced surges.

Overview and Purpose

A surge-enabled distribution box integrates surge protection modules into a standard distribution box to absorb high-energy surges and prevent damage to downstream circuits and equipment. These boxes are essential in environments prone to lightning strikes, transient overvoltages, or unstable power supply, including residential, industrial, data center, and photovoltaic (PV) installations .

Multi-Level Surge Protection

Surge-enabled distribution boxes often employ tiered protection:

- Level 1 SPD: Installed at the main power entry, designed to handle high-current surges from direct or induced lightning. Typical specifications include a surge discharge current $\geq 12.5\text{kA}$, maximum discharge capacity $\geq 100\text{kA}$ per phase, and voltage protection level $\leq 2500\text{V}$.
- Level 2 SPD: Installed within distribution equipment to protect sensitive devices, absorbing residual surge energy. Maximum discharge capacity is $\geq 40\text{kA}$ per phase, with voltage protection $\leq 2000\text{V}$.
- Level 3 SPD: Installed at the equipment input for precision electronics, with maximum discharge capacity around 20kA per phase and voltage protection $\leq 180\text{V}$.
