

TP-7400 Router with 200Mbps Fiber Optic Cable

AI Overview

The TP-Link M7400 is a 4G LTE mobile router and is not designed to directly handle a 200Mbps fiber optic connection, but TP-Link fiber-compatible routers can fully utilize such speeds when connected via an ONT.

Compatibility Overview

The TP-Link M7400 is a mobile LTE router that supports 4G+ Cat6 speeds up to 300Mbps download and 50Mbps upload . It is designed for SIM-based mobile networks rather than direct fiber optic connections. Therefore, it cannot directly connect to a fiber optic cable to achieve 200Mbps speeds. For fiber optic internet, you typically need a fiber-compatible TP-Link router or a standard router connected to an Optical Network Terminal (ONT) provided by your ISP . The ONT converts the fiber signal into Ethernet, which the router can then distribute via Wi-Fi or wired connections.

Recommended Setup for Fiber

- Connect the ONT to the Router: Plug the Ethernet cable from the ONT into the WAN port of a TP-Link fiber-compatible router .
- Router Configuration: Access the router's control panel via its default IP (usually 192.168.0.1) and log in with the default credentials (often "admin"/"admin"), .
- Network Settings: Configure your PPPoE credentials if required by your ISP, set up Wi-Fi SSID and password, and ensure proper LAN IP settings .
- Security: Enable WPA3 or WPA2 encryption and set a strong password to secure y...
