

Telecom Fiber Optic Patch Cord Wire Diameter Specifications

AI Overview

Telecom-grade fiber optic patch cords typically have an outer diameter ranging from 2.0 mm to 3.0 mm, depending on the fiber type and jacket construction.

Fiber Core and Cladding

The core diameter varies by fiber type:

- Single-mode (OS2): 8–10 μm core, 125 μm cladding
- Multi-mode (OM1-OM5): 50 μm or 62.5 μm core, 125 μm cladding The cladding is standardized at 125 μm for both single-mode and multi-mode fibers, providing the optical boundary for light propagation .

Cable Jacket and Outer Diameter

The outer diameter of telecom-grade patch cords depends on the jacket type and fiber count:

- Simplex patch cords (single fiber): typically 2.0–2.5 mm
- Duplex patch cords (two fibers in a single jacket): typically 3.0 mm
- Ruggedized or armored cables may exceed 3.0 mm for additional mechanical protection . The jacket material is usually PVC, LSZH (Low Smoke Zero Halogen), or OFNP/OFNR-rated flame-retardant material, which slightly affects the diameter
