

Temporary distribution box type

AI Overview

Temporary distribution boxes, also known as spider boxes, come in various types designed for indoor, outdoor, and mobile applications, with different amperage ratings and connector configurations.

Overview

A temporary distribution box (TPDB) is a portable electrical hub that safely distributes power from a single source, such as a generator or temporary utility service, to multiple circuits for tools, lighting, or equipment on job sites or events. They are commonly used in construction, outdoor events, exhibitions, and emergency setups.

Types of Temporary Distribution Boxes

- Indoor Temporary Distribution Boxes
 - Designed for dry, controlled environments.
 - Often use standard 120V or 240V outlets.
 - May include pluggable connector systems like Wieland's gesis® MINI or CLASSIC for quick setup.
 - Typically lower IP ratings since weatherproofing is less critical.
- Outdoor Temporary Distribution Boxes
 - Built to withstand weather and rough conditions.
 - Enclosures often have NEMA 3R or higher ratings for rain and dust protection.
 - Equipped with heavy-duty impact-resistant steel or epoxy-coated materials for durability.
 - Include weatherproof covers and GFCI-protected outlets for safety....
