

The FC interface was disconnected when I unplugged it

Overview

Sometimes Windows locks the port, so try unplugging and replugging the USB cable to reset it. If that doesn't work, restart your PC. Used when your flight controller is in normal operating mode — this allows Betaflight Configurator to connect, read, and write settings. Windows usually installs this driver automatically, so for. Note: Alternatively, use `network interface show -data-protocol fcp -fields status-admin,status-oper,status-extended,curr-port` Connection Port Admin Operational 10c true 0 up link disconnected [. Check if the UART is Enabled The most common cause is the UART being disabled. If no computer is. If receiver firmware is already 3. x, and you're still getting the "Not Enough Space" error when flashing via WiFi, make sure you are selecting the correct method in the Configurator (via WiFi, in this case). The interfaces belonging to the PortChannel have incompatible modes. An improper connection is detected. There is known bug that INAV.
