

The fan on top of the outdoor server rack is not spinning

AI Overview

A server rack fan that is not spinning can be caused by mechanical obstruction, electrical failure, or connection issues, and should be inspected carefully to prevent overheating.

Immediate Safety and Inspection

Before inspecting the fan, power off the server rack to avoid injury from hot components or sharp edges . Ensure the fan is accessible and that the rack cover is properly removed or opened.

Common Causes and Solutions

1. Mechanical Obstruction or Dust

- Dust, debris, or foreign objects can block the fan blades. Remove the fan assembly and clean the blades, motor housing, and vents thoroughly .
 - Check if the blades spin freely by hand. If they do not, the bearings may be seized and require lubrication or replacement .
- #### 2. Electrical Issues
- Verify that the fan is receiving power. Check the circuit breaker, wall switch, and any inline power connections .
 - Inspect the fan connector and motherboard or fan control board for damage or loose connections .
 - If the fan hums but does not spin, the starting capacitor may have failed. Replace...
