

The role of transmission fronthaul optical cables

Overview

This is where optical communication plays a vital role, particularly in the areas of backhaul and fronthaul. To appreciate the role of optical communication. As the name implies, mobile fronthaul optical modules are optical transceiver modules used in mobile base stations, mostly industrial grade. What is mobile fronthaul?

Mobile Fronthaul, simply put, is the separation of functions within a base station so that some of the functions can be transferred. In contemporary mobile communication towers, optical cables are used instead of coaxial cables, which allow for reduced noise during data transmission while also offering low energy consumption and high bandwidth. It offers market-leading fiber density, 25G capacity and negligible latency to achieve. electronic standards and delivering strategic roadmap reports. IPEC focuses on standardizing solutions in optical chips, optical/electrical components, and optical modules. Markets addressed by IPEC include 5G, IoT and AI. Delivering low-latency, high-throughput, and reliable performance has never been more important. But how do we power the fronthaul to meet these.
