

The specifications of the ibdn fiber optic patch panel are as follows

AI Overview

Belden IBDN fiber optic patch panels are modular, high-density panels designed for reliable, high-performance optical connectivity in LAN and data center environments.

Overview

Belden's IBDN fiber optic patch panels are part of the IBDN System 10GX, engineered to support high-speed data transmission and flexible network configurations. These panels are designed for optical distribution, splicing, and patching, providing a scalable solution for both enterprise and data center networks .

Key Specifications

- **Port Density:** Panels are available in multiple configurations, including 24 ports in 1U, 48 ports in 2U, and ultra high-density 48 ports in 1U, allowing for efficient use of rack space .
- **Module Type:** The panels utilize modular fiber cassettes or frames, which can accommodate various connector types such as LC, SC, or MPO, depending on network requirements .
- **Performance:** Designed to support 10 Gb/s transmission and beyond, with performance characteristics including insertion loss, return loss, ANEXT, NEXT, and FEXT optimized for high-speed optical links .
- **Frequency Support:** Transmission performance is guaranteed up to 625 MHz, ensuring compatibility with high-bandwidth applications
