

Two-phase industrial distribution box

AI Overview

A two-phase industrial distribution box safely distributes electrical power from a two-phase supply to multiple circuits, featuring sockets, circuit breakers, and protective enclosures.

Overview

A two-phase industrial distribution box is designed to manage and distribute electrical power in industrial or commercial settings where a two-phase supply is used. It ensures safe, organized, and efficient power distribution to multiple devices or machinery while protecting circuits from overloads and short circuits .

Key Components

- Circuit Breakers (MCB/RCCB): Protect individual circuits from overloads and short circuits. Two-phase boxes often include C16 or C32 breakers depending on the load .
- Sockets/Outlets: Typically include two-core (220-250V, 16A) and five-core (380-415V, 16-32A) industrial sockets to accommodate various equipment .
- Bus Bars: Conduct electricity internally and provide a central connection point for all circuits .
- Neutral and Grounding Links: Ensure proper return paths and safety grounding to prevent electrical hazards .
- Enclosure: Made from ABS, mild steel, or polycarbonate, often rated IP44-IP54 for protection against dust and moisture .
- Indicators: LED or visual indicators for mains power status and circuit activity
