

Two-pole distribution box model

AI Overview

A two-pole distribution box is an electrical enclosure designed to distribute power across two circuits, providing protection and organized connectivity for residential, commercial, or industrial applications.

Overview

A two-pole distribution box typically houses two main circuit breakers or distribution poles, allowing for the separation and protection of two electrical lines. It is commonly used in single-phase load centers to manage power distribution, prevent overloads, short circuits, and leakage, and ensure safe operation of connected devices ().

Key Features

- Poles: Two independent poles for line-side and load-side connections ().
- Protection: Equipped with circuit breakers to safeguard against overload, short-circuit, and leakage ().
- Materials: Often made from powder-coated iron sheets with high-quality copper bus bars for neutral and grounding terminals ().
- Installation: Can be surface-mounted or flush-mounted, suitable for indoor environments such as hotels, hospitals, and commercial buildings ().
- Standards: Certified to IEC, CE, and other international standards ensuring safety and reliability ().
