

UPS power system cannot detect battery

Overview

If an APC UPS can't detect the battery inside, start by performing a hard reset. That could clear up any short-term errors or glitches preventing it from detecting the battery. Besides that, the battery's connectors could be loose or disconnected, or the battery could have no. Follow these steps to keep your UPS in optimal condition:. If your UPS is experiencing issues, here are some common problems and their solutions: UPS Not Turning On: Check power connections, test the battery, and ensure the circuit breaker is not tripped. The following steps can be used to check: A. Check the battery voltage to see if the battery is. A "battery not detected" error doesn't automatically signify the end of your UPS. Let's dive. Windows 11 does not recognize the UPS as a battery, meaning it does not show up in the taskbar, battery-related settings in the power plan (processor power management) have no effect once the APC loses line power, and BatteryInfoView shows completely no information about the battery. Solution: Conduct a self-test (when applicable) and verify the power draw of the attached load doesn't exceed the capacity. I have UPS SRT5XLI and 2 external battery packs SRT192XLBP connected.
