

Viewing the optical signal on the Huijue switch

AI Overview

You can view the optical signal and module information on a Huawei switch using the display transceiver and display transceiver diagnosis commands.

Checking Optical Module Status

To view the status of an optical module on a specific interface, use the command:

```
display transceiver interface
```

This command shows details such as transceiver type, connector type, wavelength, transfer distance, vendor information, and whether Digital Diagnostic Monitoring (DDM) is supported. For example, it can display the module type (e.g., 1000_BASE_LX_SFP), wavelength (e.g., 1310 nm), and maximum transmission distance. If you want to check all optical ports at once, simply run:

```
display transceiver
```

This provides a summary of all optical modules installed on the switch.

Viewing Detailed Diagnostic Information

For more in-depth monitoring, including receive and transmit power, temperature, voltage, and bias current, use the verbose parameter:

```
display transceiver interface verbose...
```
