

Weight of a pigtail-type beam splitter

Overview

The most common application is to combine the light of two pump lasers into a single fiber to double the pump power to an Erbium-Doped Fiber Amplifier (EDFA) or a Raman Amplifier. The Polarization Beam Combiner/Splitter is a compact high performance lightwave component that combines two orthogonal polarization signals into one output fiber. Light from an input fiber is first collimated, then sent through a beam splitting optic to divide it into two. A heavy-duty I-Beam, splitter wedge and torsion axle, along with a reliable engine, extend the longevity of the machine. Apply Now 4-way & 6-ways blades offer increased efficiency, speed. AI-generated from the text of manufacturer documentation. Newport offers a wide variety of Beamsplitters in various shapes.
