

Weight of galvanized cable trays in basement

AI Overview

A standard galvanized steel ladder cable tray typically weighs around 4.7 kg per meter, but actual weight varies with tray dimensions, thickness, and perforation.

Typical Weights

- Ladder Tray: For a 600 mm wide, 100 mm side rail height, 2 mm thick galvanized steel ladder tray, the weight is approximately 4.71 kg per meter (3.17 lbs per foot) .
- Perforated Tray: Perforations reduce metal volume by 15–30%, so a similar tray may weigh 3.3–4.0 kg per meter, depending on the open area percentage .
- Solid-Bottom Tray: Solid trays are heavier than perforated trays of the same dimensions, typically 5–6 kg per meter for standard widths and thicknesses .

Factors Affecting Weight

- Tray Width and Side Rail Height: Wider trays and taller side rails increase the developed metal area, raising the weight per meter .
- Sheet Thickness: Increasing thickness from 1.6 mm to 2 mm can increase weight by roughly 25% for the same profile .
- Perforation Pattern: Perforated trays reduce weight by 15–30% depending on the cut-out design .
- Tray Length: Total weight is calculated by multiplying the per-meter weight by the total run length. For example, a 6-meter ladder tray run weighs about 28.26 kg .
- Covers and Accessories: Adding covers or couplers increases the total installed weight
