

What are the cable trays in cable shafts called

AI Overview

Cable trays in cable shafts come in multiple models—ladder, trough, solid bottom, and channel—made from steel, aluminum, or stainless steel, designed to meet ANSI/NFPA, ASTM, and NEMA standards.

Types of Cable Trays

-

Ladder Type: Features two side rails connected by rungs, ideal for heavy-duty power cables and long cable runs. It allows excellent ventilation and heat dissipation, reducing the risk of overheating .

-

Trough Type: Enclosed on three sides with a ventilated or solid bottom, suitable for medium-duty applications and provides protection against mechanical damage .

-

Solid Bottom Type: Fully enclosed tray that protects cables from dust, moisture, and electromagnetic interference. Often used in sensitive instrumentation or control applications .

-

Channel Type: Narrow, U-shaped tray used for short cable runs or branch connections. Can be ventilated or solid and is often used where aesthetics or space constraints are important
