

What color is best for optical fiber cables

AI Overview

The best color for optical fiber cables depends on the fiber type and standard; yellow is most common for single-mode, orange for OM1/OM2 multimode, aqua for OM3/OM4, and lime green for OM5, following TIA-598-C/D standards.

Outer Jacket Colors

The outer jacket color is the quickest way to identify fiber type in a network:

- Yellow: Single-mode fiber (OS2), ideal for long-distance links and most data center backbones .
- Orange: OM1 and OM2 multimode fiber, typically used in legacy enterprise networks .
- Aqua: OM3 and OM4 multimode fiber, common in modern high-speed data centers supporting 10G, 40G, and 100G Ethernet .
- Lime Green: OM5 multimode fiber, designed for wideband applications and future-proofing high-speed networks . Custom jacket colors can also be used for in-building distribution or hybrid cables, provided the labeling clearly indicates fiber type .

Individual Fiber Strand Colors

Inside multi-fiber cables, each fiber is color-coded according to a 12-color sequence (Blue, Orange, Green, Brown, Slate, White, Red, Black, Yellow, Violet, Rose, Aqua) to simplify identification during splicing, termination, and troubleshooting . For cables exceeding 12 fibers, the sequence repeats with stripes or tube identifiers to maintain unique identification
