

What router and network cable should I use for a 300m fiber optic connection

AI Overview

For a 300-meter fiber optic link, use a high-performance fiber-compatible router with SFP ports and single-mode fiber cabling with appropriate transceivers.

Router Recommendations

For fiber internet, especially at multi-gigabit speeds, you need a router that can handle high throughput and provide stable wired and wireless connections. Top options include:

- NETGEAR Nighthawk RS700S (Wi-Fi 7): Supports multi-gig speeds, 10G LAN/WAN ports, and LAN aggregation for up to 2 Gbps wired throughput. Ideal for business or high-demand home setups .
- ASUS ROG GT-AXE16000: Designed for gaming and high-bandwidth applications, offering ultra-low latency and high throughput .
- TP-Link Archer AX55 or AX90: Reliable Wi-Fi 6 routers suitable for smaller setups or budget-conscious users, supporting gigabit speeds and multiple devices . For a 300-meter fiber link, ensure the router has SFP (Small Form-factor Pluggable) ports or supports fiber media converters, as standard Ethernet ports cannot directly handle fiber connections over this distance.

Network Cable Recommendations

Standard Ethernet cables (Cat5e, Cat6, Cat6a) are limited to 100 meters for reliable...
