

What router should I use for a 60m fiber optic connection

AI Overview

For a 60 Mbps fiber connection, even a mid-range Wi-Fi 6 router will provide excellent performance, coverage, and future-proofing.

Recommended Router Options

- TP-Link Archer AX55 – A budget-friendly Wi-Fi 6 router that delivers reliable speeds, supports multiple devices, and is ideal for small to medium homes. It provides strong coverage and modern security features, making it a great choice for a 60 Mbps fiber plan .
- Netgear Nighthawk RS700S – A Wi-Fi 7 router designed for multi-gig fiber plans. While overkill for 60 Mbps, it offers excellent range, future-proofing, and advanced features like LAN aggregation and robust internal antennas .
- ASUS ROG Strix AX3000 – A Wi-Fi 6 router with wide coverage and good device handling, suitable for homes with multiple users and smart devices .

Key Considerations

- Speed Compatibility: A 60 Mbps fiber connection does not require a high-end multi-gig router. Any modern Wi-Fi 6 router will handle this speed easily without bottlenecks .
- Coverage Area: Choose a router that matches your home size. For larger homes, consider mesh systems like Linksys Velop AX4200 to avoid dead zones .
- Number of Devices: Ensure the router supports the number of devices in your household. Wi-Fi 6 routers handle multiple devices efficiently using MU-MIMO and O...
