

What type of cable is used for industrial lighting cable trays

AI Overview

Type TC (Tray Cable) is the most commonly used cable for industrial lighting cable trays, rated for 600 volts and suitable for power, control, and lighting circuits.

Overview of Tray Cables

Tray cables are multi-conductor cables designed for installation in cable trays, raceways, or supported by messenger wires. They are engineered to withstand mechanical stress, moisture, sunlight, chemicals, and high temperatures, making them ideal for industrial environments. Tray cables simplify wiring by safely delivering power or signals over long distances while meeting stringent safety and performance standards.

Common Types for Industrial Lighting

- Type TC (Tray Cable)
- Rated for 600 volts and suitable for power, control, and lighting circuits.
- Constructed with multiple insulated conductors under a non-metallic jacket, often PVC or nylon-coated PVC.
- Can be installed in cable trays, raceways, or outdoor locations if supported by a messenger wire.
- Variants include VNTC (Vinyl Nylon Tray Cable) and XHHW (Cross-linked Polyethylene High Heat Water-resistant Tray Cable), offering flame resistance, chemical resistance, and durability
