

What type of distribution box is used

AI Overview

The type of distribution box you should use depends on the installation environment, electrical load, number of circuits, and whether it is for residential, commercial, or industrial use.

Key Considerations

Installation Environment:

- Indoor distribution boxes are suitable for protected areas like homes, offices, and utility rooms where exposure to rain, dust, or harsh weather is minimal .
- Outdoor distribution boxes are designed for exposed environments and require a higher IP protection rating to guard against water, dust, and temperature changes .

Material:

- Metal boxes (steel or aluminum) are preferred for industrial and commercial applications due to their mechanical strength, impact resistance, and durability .
- Plastic boxes (thermoplastics like PC or ASA) are lightweight, corrosion-resistant, and suitable for residential or light commercial use .

Mounting Method:

- Surface-mounted boxes are installed directly on walls and are ideal for retrofits, industrial environments, or outdoor use .

- Flush-mounted boxes are embedded into walls for a cleaner appearance, commonly used in modern homes and offices .

- Pole-mounted boxes are designed for outdoor utility applications, such as street lighting .

Electrical Load and Phase:

- Single-phase distribution boxes are suitable for residential properties and small commercial loads
